

Winter Hard Cranking Landing Gear

For Jost Landing Gear:

The standard grease pack (A400/A401) operating temperature is:

0°F to 275°F

The low temperature grease (A440/A441 Magnum) operating range is:

-55°F to 330°F

If you have experienced hard cranking due to extreme cold temperatures, you can add low temperature grease during your regular maintenance (even during warmer months).

Low temperature grease is fully compatible with the standard grease pack. This mixture will lower the operating temperature of the grease in the gearbox to assure smooth operation when colder temperatures return.

If you still experience problems, specify the Jost Magnum (A440/A441). This model contains 100% low temperature grease.

The right to alter specifications is reserved.
