

Extreme Cushion

Double Cushion Foot

Tough situations call for forgiving equipment. The doubled cushion foot gives the forgiveness and reliability a tough environment calls for. With an increased cushion inside of the shoe, a trailer can withstand a greater impact than before without risking damage to the landing gear.

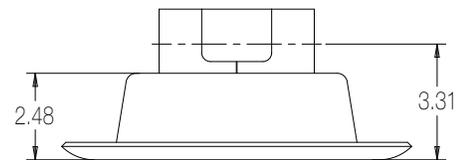

- Reduction in stress when leg impacts the ground with significant force.
- Protects the integrity of the internal workings of the leg.
- Will retrofit onto any current cushion foot landing gear.
- Available as an option on new orders.
