

KINGPIN SERIALIZATION

Ensuring Safety, Quality & Full Transparency

Our new kingpin traceability feature sets a new standard in safety and quality, providing unique identification for every kingpin through a scannable data matrix code. This innovation allows **full traceability of material chemistry, forging, machining processes, hardness values, and even inspection records like magnetic particle photos**—ensuring unmatched reliability and transparency in the field.

- Unique ID: Data Matrix Code and serial number for full traceability.

- Inspection Data: Tracks material, machining, and hardness.
- Magnetic particle inspection; ultrasound pass/fail verification (recorded in IGear).

- Easy Verification: Scannable data for quick access.

- All inspection data tied to each serial number in IGear.

AI Assisted Inspection Example
